Ex Parte Qualyle:

1. This application is in condition for allowance except for the following formal matters:

Drawings

2. The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81. No new matter may be introduced in the required drawing.

Specification

3. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.

Art Unit: 2665

- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

4. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

5. In abstract, page 17, line 2, "The present invention concerns an access network for mobile terminals ..." should be replaced with "An access network for mobile terminals ...".

Claims

6. Above claim 1, "WHAT IS CLAIMED IS:" should be added.
7. In claim 1, line 11, "the user circuit" should be changed to --the user channel- - for consistency with prior recitation "user channel" in line 9.

Art Unit: 2665

8. In claim 1, line 16, "to do this" should be deleted to improve claim clarity.
9. In claim 1, line 19, "to do this" should be deleted to improve claim clarity.
10. Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Reason for Allowance

11. The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest the method of providing access networks for mobile terminals (based on ATM technology) with providing fixed VPI on traffic channel and fixed VCI on the signaling channel of the virtual connection when a mobile terminal is in roaming from one base station to another base station. The invention discloses that when a mobile terminal is in roaming, the Virtual Path Identifier (VPI) of a sending user cell or traffic channel is fixed and its Virtual Circuit Identifier (VCI) is varied, in which means it could be modified. The invention also discloses that when a mobile terminal is in roaming, the Virtual Path Identifier (VPI) of a sending signal cell or signal channel is varied, in which means it could be modified and its Virtual Circuit Identifier (VCI) is fixed.

Art Unit: 2665

12. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

13. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kuelnel (5,787,077) et al, teaches a dynamic allocation of both new VPI and VCI to the mobile terminal when the mobile terminal is roaming from one base coverage area to another base coverage area.

Kuelnel (5,907,542) et al, teaches a method of allocating a new signaling virtual channel identifier (SVCI) when a mobile terminal is moving from one base coverage area to another base coverage area or when a loss or carrier connection is detected.

Petersen (6,574,221), teaches a scalable ATM communicating network in the Mobile Switching Center and the base station.
